

Senior Software Engineer with 7 years of experience in architecting high-performance systems and full-stack data platforms. Deeply proficient in **Distributed Systems (Spark/Hadoop)** and **Backend Architecture (Java/Go/Python)**, with a current focus on **Agentic AI and LLM Orchestration**.

EXPERIENCE

Senior Data Engineer | Visa | February 2026 – Present | Bengaluru

- Working on maintaining ETL pipeline that processes client's transactions and invoice data, based on company subscription and delivers the data to outbound, based on outbound subscription. Tools used are **Scala, Java, Springboot, IBM DB2, Hadoop and Hive**.

Data Scientist | Fractal Analytics | October 2025 – February 2026 | Bengaluru

- Developed backend APIs and managed database migrations for the Cogentiq Platform using **FastAPI, SQLAlchemy, and Alembic**.
- Built agentic AI workflows with **CrewAI and Langfuse**, deploying containerized applications via **Docker** on **Azure Cloud**.

Senior Data Engineer | Circana | January 2024 – October 2025 | Bengaluru

- Modernized legacy Hive workloads by migrating to **PySpark and Airflow** while automating CI/CD deployments via **Jenkins**.
- Engineered end-to-end pipelines to integrate UPC and impression data with internal datasets for sales metrics using **Spark and AWS S3**.

Data Engineer | Swiss Re | February 2021 – January 2024 | Bengaluru

- Worked on developing internal CRM dashboard (Customer 360) using **PySpark, Palantir Foundry, Microsoft SQL Server, Microservices (Springboot)**.
- Built **SparkML** model to do fuzzy matching of company data (name, address, etc.) to group similar company names based on companies defined in our CRM dashboard. This helped in accurate tagging of companies under the same group.
- Built CRM data quality monitoring systems and trained **SparkML** models to classify NPS responses into structured categories.
- Refactored SQL and parallelized workloads to optimize legacy **R pipelines**, significantly improving processing speed and reliability.

Software Engineer | Nissan Digital | July 2019 – February 2021 | Trivandrum

- Built scalable ETL services for inventory optimization using **Python, Prefect, and SQLAlchemy**, leveraging **AWS Lambda and ECS** for serverless execution.
- Contributed to the full software development lifecycle of vehicle volume estimation tools, focusing on data integrity and cloud-native infrastructure.

SKILLS

Python, Java, Scala, Golang, C, Bash, Spark, PySpark, Hadoop, Hive, Airflow, Pandas, Polars, Palantir Foundry, IBM DB2, PostgreSQL, Oracle, SQL Server, BigQuery, AWS, Azure, GCP, Docker, Jenkins, Linux (Fedora/Debian), Spring Boot, FastAPI, CrewAI, Langfuse, LangChain, Generative AI, LLM Orchestration, Microservices, Performance Optimization, Data-Oriented Design

EDUCATION

B.TECH, CSE | 8.9 CGPA | 2015-19 | KIIT University, Bhubaneswar

ACHIEVEMENTS

- Swiss Re Triannual Award:** Recognized for technical excellence in system optimization.
- Nissan Digital Spotlight Award:** For exceptional project contribution and architecture.
- Finalist:** 7th CSI In-App National Project Awards.
